

We provide Botox and Xeomin procedures that reduce muscle contractions reducing frown lines

***SCHEDULE A FREE CONSULTATION!***

Frown lines form when facial expressions are made as the muscle under the skin contracts. Over time, as your skin ages, these repeated expressions cause lasting frown lines. Neurotoxins, such as XEOMIN, are prescription medications that block the release of chemicals that cause these muscle contracts . . . so, frown lines are softened.

## BOTOX / XEOMIN

**BOTOX** - The first and only treatment FDA-approved to temporarily make moderate to severe

frown lines, crow's feet and forehead lines look better in adults. You may begin to notice results within 24 to 48 hours for moderate to severe frown lines. Botox delivers predictable, subtle results so you look like you, only with less noticeable facial lines.

**XEOMIN** - Self-care is not “selfish.” Caring about how you look is not “superficial.” And doing something about your frown lines is not “wrong.” It’s time to X out the judgment, the labels, the doubts, the regrets. Oh, and the frown lines. With XEOMIN®, the only clinically proven anti-wrinkle injection uniquely purified to remove unnecessary proteins, effects occur within one week, and the results last from three to six months, making it comparable to Botox in terms of both onset and duration of action.
