

MICROBLADING

We provide Microblading procedures that add semi-permanent pigment to the skin.

SCHEDULE A FREE CONSULTATION!

Do you want the look of fuller, shapelier, or more symmetrical eyebrows, without having to pencil them in every morning? In a microblading treatment, a Specialist determines the most flattering brow shape for your face. Then they numb your brows and use a handheld tool with a dozen tiny needles to draw hair-like strokes in your epidermis, the outer layer of skin. These are filled with medical-grade pigment to create a kind of semi-permanent eyebrow tattoo that creates an illusion of fullness.
