

SKIN TIGHTENING

We provide Skin Tightening procedures to reduce the appearance of fine lines and loose skin.

SCHEDULE A FREE CONSULTATION!

Skin Tightening is an effective treatment for improving skin laxity without surgery or downtime. The procedure uses a safe infrared light to heat the water content in the tissue deep below the skin's surface causing collagen fibers to contract and tighten to smooth out fine lines and sagging skin. The heat also stimulates fibroblasts which repairs cells in your skin to produce new collagen, creating long term results.
