

VAMPIRE FACIAL

We provide Vampire Facial procedures application of PRP (platelet-rich plasma) to the face to stimulate cells.

SCHEDULE A FREE CONSULTATION!

The Vampire Facial, or Platelet Rich Plasma (PRP), involves extracting a small amount of a patient's blood from their arm and spinning it in a centrifuge to separate the plasma from the red and white blood cells.

The concentrated plasma, which is rich in platelets (the part of the blood rich with growth factors) is then injected into the face.

The basic PRP treatment has been used for almost 20 years to accelerate the healing of wounds and burnt skin and help athletes.
